Bruk, S. Z. The fundamental solutions of a system of ~~parabolic~~ equations of parabolic type. Doklady Akad. Nauk SSSR (N.S.) 60, 9-12 (1948). (Russian)
 The fundamental solutions of the following system of equations are studied:

$$\frac{\partial u_i}{\partial t} - \sum_{k=1, \dots, N} A_{ik}^{(j)}(t; x_1, \dots, x_n) \frac{\partial^k u_i}{\partial x_1^k \dots \partial x_n^k} = 0.$$

where the characteristic roots of the λ -matrix

$$\lambda E - \sum_{k=1, \dots, N} A_{ik}^{(j)}(t; x_1, \dots, x_n) (i\alpha_k)^{k_1} \dots (i\alpha_k)^{k_n}$$

satisfy $\Re(\alpha_k) < 0$ for all k , for $0 \leq t \leq T$ and for all real α_k such that $\sum \alpha_k^2 = 1$.

The solutions are found, following a method by E. E. Levi. In the original equations the x_i inside the parentheses are replaced by parameters y_i which are independent of the x_i . The system of equations so obtained has coefficients which depend on t only and its fundamental solutions may be constructed by Fourier analysis. If these solutions are denoted by $u_r^j(t; t-\tau; y; x-\xi)$, the fundamental solution of the original equations is

$$u^j(t; \tau; x; \xi) = u_r^j(t; t-\tau; x; x-\xi) +$$

$$\int_0^\tau dt' \sum_{s=1, \dots, N} u_s^j(t; t-t'; z; x-x') v_r^s(t'; \tau; x'; \xi) \delta x_1' \dots \delta x_n'$$

The functions ϕ_r^s will have to be determined from integral equations. That solutions of these integral equations exist is claimed in a lemma. Proofs of this and other essential lemmas are not given.

TITLE: On solutions with a singularity of first order for linear elliptic differential equation systems of second order

PERIODICAL: Referativnyi zhurnal, Matematika, no. 2, 1962, 64, abstract 2B285. ("Sb. tr. Mosk. inzh.-stroit. in-t," 1960, no. 30, 3-24)

TEXT: Considered is the linear differential equation system of second order

$$L_s(u) = \sum_{jkl} A_{sj}^{kl} \frac{\partial^2 u_j(P)}{\partial x_k \partial x_l} = 0 \quad (1)$$

(j, s = 1, 2, ..., N; k, l = 1, 2; $A_{sj}^{kl} = A_{sj}^{lk}$, $P = (x_1, x_2)$)

with constant and real coefficients of elliptic type. Let $\alpha_1^{(k)}$ be the roots of the characteristic equation

Card 1/4

f

S/044/62/000/002/031/032
C111/C444

On solutions with a singularity . . .

$$\Delta(\alpha_1, \alpha_2) = \det \left\| \sum_{kl} A_{ij}^{kl} \alpha_k \alpha_l \right\| = 0$$

for $\alpha_2 \neq 0$ and real. The investigation of the author is connected with the solution v_{sp} of the Cauchy problem

$$L_s(v) = \sum_j \left[A_{sj}^{11} \frac{d^2 v_j}{dx_1^2} + 2A_{sj}^{12} i\alpha_2 \frac{dv_j}{dx_1} - A_{sj}^{22} \alpha_2^2 v_j \right] = 0$$

$$v_{sp}(0) = 0, \quad \sum_s A_{sj}^{11} v'_{sp}(0) = f_{jp} \quad (s, j = 1, 2, \dots, N)$$

This solution is represented in the form

$$v_{sp}(x) = \overset{+}{v}_{sp}(x_1) + \overset{-}{v}_{sp}(x_1)$$

where $\overset{+}{v}_{sp}(x_1)$ is the sum of the residues of the function E_{sp} in all
Card 2/4

S/044/62/000/002/031/092
C111/C444

On solutions with a singularity . . .
poles $\alpha_1^{(k)}$ of the upper halfplane, $\bar{v}_{sp}(x_1)$ is the sum of the
residues of E_{sp} in all poles $\alpha_1^{(k)}$ of the lower halfplane and

$$E_{sp}(\alpha_1, \alpha_2) = \frac{\Delta_{sp}(\alpha_1, \alpha_2)}{i\Delta(\alpha_1, \alpha_2)} e^{ik_1 x_1}$$

where $\Delta_{sp}(\alpha_1, \alpha_2)$ denotes the corresponding algebraic complement.
It is proved that $\det \|v_{sp}^+(0)\| \neq 0$ is necessary in order the
Dirichlet problem to be uniquely solvable in the domain $x_1 > 0$ in
the class of those functions which are continuous in $x_1 \geq 0$, there
possessing continuous derivatives of first order and at infinity
satisfying the condition

$$u_j = o(1/2 \varepsilon_1), \frac{\partial u_j}{\partial x_k} = o(1/r^{1+\varepsilon_2}), (\varepsilon_1 \geq 0, \varepsilon_2 > 0, r = \sqrt{x_1^2 + x_2^2})$$

One constructs solutions of (1) being continuous together with all
derivatives with respect to x_1 and x_2 everywhere except of the point

Card 3/4

On solutions with a singularity . . . S/044/62/000/002/051/092
C111/C444

$x_1 = x_2 = 0$; these solutions are analogous to those given by Ya. P. Lopatinskiy (Ukr. matem. zh., 1951, 3, no. 1 and no. 3; 1953, 5, no.2) and Z. Ya. Shapiro (Dokl. AN SSSR 1945, 46, no. 4; Matem. sb. 1951, 28(70), no. 1). These solutions are expressed by the fundamental solutions of the equation (1) of Ye. Ye. Levi (Uspekhi matem. nauk, 1941, 9) by aid of linear differential operations with constant and real coefficients.

S/044/62/000/002/032/092
C111/0444

The problems of Dirichlet and . . .

one investigates the Dirichlet problem and "the first Neumann problem" which consist in the determination of that solution of (1) which satisfies the boundary conditions

$$\sum_{jkl} B_{sj}^{kl} \frac{\partial u_j(P)}{\partial x_k} \cos(x_k \bar{n}_P) = f_s(P) \quad (P \in \Gamma),$$

and of finding that solution of (2) which satisfies the boundary conditions

$$\sum_{skl} B_{sj}^{kl} \frac{\partial u_s(P)}{\partial x_l} \cos(x_k \bar{n}_P) = f_j(P) \quad (P \in \Gamma)$$

where Γ is the boundary of the domain and B_{sj}^{kl} are real constants being uniquely determined in the preceding paper of the author (Ref. 2B285). The investigation follows according to the potential method with the adjoining reduction of the corresponding problems to the investigation of systems of Fredholm integral equations of second kind.

Card 2/3

The problem of Dirichlet and . . .

S/044/62/000/002/032/092
C111/0444

One investigates the differential properties of the potentials of the single and of the double layer. The existence of the solution of the interior Dirichlet problem and of the exterior "first Neumann problem" is proved for the systems (1) and (2) under the supposition that these problems are uniquely solvable merely for (1) and that the boundary conditions are continuous and bounded. Under the supposition that (1) is strongly elliptic one proves the theorems of existence and uniqueness for the interior Dirichlet problem with discontinuous boundary conditions.

TITLE: The interior Dirichlet problem with discontinuous boundary conditions for elliptic systems of higher order

PERIODICAL: Referativnyi zhurnal, Matematika, no. 2, 1962, 65, abstract 2B287. ("Sb. tr. Mosk. inzh.-stroit. in-t", 1960, no. 38, 47-66)

TEXT: Considered is an elliptic system of linear differential equations with the order $2m$, with constant coefficients and with two independent variables:

$$L_r(D_{x_1}; D_{x_2}) u = \sum_{j=1}^{(2m-1)_j} A_{rj} D_{x_1}^{2m-1} D_{x_2}^1 u_j = 0 \quad (1)$$

$$\left(D_{x_k}^\lambda = \frac{\partial^\lambda}{\partial x_k^\lambda}; r, j = 1, 2, \dots, N; l = 0, 1, \dots, 2m \right) .$$

Card 1/3

The interior Dirichlet problem . . . S/044/62/000/002/033/092
C111/C444

For the system (1) the Dirichlet problem is investigated. A solution of (1) is to be found, which attains prescribed values on the boundary of the domain together with all its derivatives in direction of the normal up to $(m-1)$ -th order. By the same method as in the preceding paper (Ref. 2B285) one obtains necessary conditions (being analogous to those formulated in Ref. 2B285) for the fact that the Dirichlet problem for (1) in the domain $x_1 > 0$ possesses a unique solution in a class of functions which consists of functions, being together with all their derivatives up to the $(m-1)$ -th order inclusively continuous in $x_1 \geq 0$ and possessing the following orders

$$D_{x_1}^h D_{x_2}^l u_i(x_1, x_2) = O(r^{-h-l-m})$$

$$\text{for } r \rightarrow \infty \quad (r = \sqrt{x_1^2 + x_2^2}) .$$

For the Dirichlet problem for (1) with discontinuous boundary conditions one proves the existence of the solution in a simply connected domain which has a sufficiently smooth convex boundary. The solution exists

Card 2/3

The interior Dirichlet problem . . . S/044/62/000/002/033/092
 in a certain class of functions. For strongly elliptic systems with
 real coefficients C111/C444

$$L_i(u) = \sum_{(jk)} A_{ij}^{(k_1, \dots, k_{2m})} \frac{\partial^{2m} u_j}{\partial x_{k_1} \dots \partial x_{k_{2m}}} = 0$$

$$(K_s \geq K_{s+1}, \quad \Delta_{ij}^{(1,1, \dots, 1)} = \delta_{ij}, \quad \Lambda_{ij}^{(k_1, \dots, k_{2m})} = 0$$

where $2m < \sum_{p=1}^{2m} k_p < 3m$) one proves the maximum principle and the uniqueness of the solution of the Dirichlet problem in a simply connected domain which is bounded by a sufficiently smooth convex curve. (For systems of second order the maximum principle has been proved by N. M. Lavrent'yev (Rzh Mat. 1960, 1703).

$$(i, j = 1, 2, \dots, N; l = 0, 1, \dots, 2m; D_{x_k}^\lambda = \frac{\partial^\lambda}{\partial x_k^\lambda})$$

one investigates the "homogeneous Dirichlet problem" with the boundary conditions $D_{x_p}^h D_{x_s}^{m-1-h} u_i(P) = f_i^h(P) (P \in \Gamma), (h=0, 1, \dots, m-1, i=1, 2, \dots, N);$

Card 1/3

Boundary value problems for . . .

S/044/62/000/002/034/C92
C111/C444

for the problem conjugate with (1) one investigates the "homogeneous first Neumann problem" with the boundary conditions

$$\sum_{s\lambda} B_{sj}^{h\lambda}(\mathbf{n}_p) D_{\mathbf{n}_p}^\lambda D_{\mathbf{s}_p}^{m-\lambda} u_s(P) = f_j^h(P) \quad (P \in \Gamma)$$

(s, j = 1, 2, ..., N; $\lambda, h = 0, 1, \dots, m-1$)

where \mathbf{n}_p is the normal vector, \mathbf{s}_p is the positively directed tangent vector, $D_{\mathbf{n}_p}^\lambda$ and $D_{\mathbf{s}_p}^{m-\lambda}$ are the derivatives in the directions \mathbf{n}_p and \mathbf{s}_p ,

Γ is the boundary of the domain, $B_{sj}^{h\lambda}(\mathbf{n}_p)$ are uniquely determinable real functions, satisfying a certain condition. The investigation follows according to the same method as in the paper of the author (Ref. 2B286) i. e. one constructs potentials for (1) and for the conjugate system, corresponding to the potentials of the single and double surface distribution, and by aid of it the boundary value problems are reduced to the investigation of Fredholm integral equations of second kind. For a finite simply connected domain

j

Card 2/3

Boundary value problems for . . .

S/044/62/000/002/034/092
C111/C444

with sufficiently smooth boundary Γ one proves the existence of the solutions of the interior "homogeneous Dirichlet problem" for system (1) and of the exterior "homogeneous first Neumann problem" for the system conjugate with (1); one supposes:

1. the uniqueness of the solution of the "homogeneous first Neumann problem" for the system conjugate with (1) in the class of functions C_{m-1} in the domain $G + \Gamma$; where the functions are to satisfy the conditions $D_{x_1}^k D_{x_2}^{m-k} u_i \rightarrow 0$ for $r \rightarrow \infty$; 2. the uniqueness of the solu-

tion of the interior "homogeneous Dirichlet problem" in the function class C_{m-1} in the domain $G + \Gamma$. For the usual Dirichlet problem for (1) one proposes a new solution method consisting of a reduction of this problem to the corresponding "homogeneous Dirichlet problem".

TITLE: ~~Tuned-Reed~~ Relay With Fixed Contacts (Chastotnoye vibratsionnoye rele s zhestko fiksiruyushchimi kontaktami)

PERIODICAL: Priborostroyeniye, 1958, Nr 9, pp. 30-30 (USSR)

ABSTRACT: The relay described is protected by patent Nr 103 674. It works on the principle of electromechanic resonance. It is distinguished by a reliable hold of the contacts without any auxiliary relay. The normal and off-normal positions, and the return to the normal position, are represented in a figure. Figure 2 shows how the relay tripping frequency depends on the voltage for both the ascending and the descending branch of the curve. The relay may be built with direct as well as with secondary energizing. For direct energizing, the tripping power required is 0.3 VA, and the time lag is 0.25 sec. For secondary energizing the corresponding values are 0.05 VA, resp. 0.4 sec. Adjustment limits of the vibrator are 3 - 10 cycles, tripping bandwidth 0.5 - 3 cycles, the temperature coefficient of the vibrating nickel steel reeds is below 0.2 % in the -20 to +70°C temperature range.

TITLE: A method for producing stabilizers for vinyl polymers. Class 39, No. 168877 ¹⁵

SOURCE: Byulleten' izobretaniy i tovarnykh znakov, no. 5, 1965, 70

TOPIC TAGS: vinyl, polymer, stabilization

ABSTRACT: This Author Certificate presents a method for producing stabilizers for vinyl polymers by azomethyne derivatives from aldehydes and phenylenediamines. For obtaining effective and practicable stabilizers, aromatic aldehydes are used, such as benzoin, 2, 6-di-tert-butyl-n-oxybenzoin and others, and, for the phenylenediamine, ortho-, meta-, or paraphenylenediamine is used.

TITLE: Synthesis and antioxidant properties of sulfur- and nitrogen-bearing Ionol derivatives

SOURCE: AN SSSR. Bashkirskiy filial. Khimiya sereorganicheskikh soyedineniy, soderzhashchikhsya v neft'yakh i nefteproduktakh, v. 7, 1964, 47-57

TOPIC TAGS: antioxidant, sulfur, nitrogen, thermooxidation/ Ionol

ABSTRACT: The retardation of oxidative degradation of hydrocarbon fuels, polyolefins, fats, and many synthetic and derived products was studied. In the present work the authors have synthesized and studied the antioxidant properties of a number of Ionol structural analogs, including azomethynes, hydrazones, amines, sulfides, and disulfides. The properties and compositions of these products are tabulated in the article. The treatment of Ionol with bromine and the condensation of 3,5-di-tert-butyl-4-oxylbenzyl bromide with primary, secondary, and tertiary amines takes place with the formation of intermediate compounds of 2,6-

Card 1/2

L 43927-65

ACCESSION NR: AT5008624 2

di-tert-butyl-4-methylene quinone. Synthetic nitrogen- and sulfur-bearing structural analogs of Ionol are able to retard oxidation reactions not only during degeneration but during development. This results from a capacity to react with the primary radicals of the oxidized substance and also from a capacity to decompose the peroxide and to bind metallic ions of variable valence. Many of the synthesized substances cause effective retardation of thermooxidation of polyolefins and fats, inhibit radiation-chemical oxidation of fats, and some become effective additives for increasing the thermooxidizing stability of jet fuels. TITLE: Additive designed to improve the thermal-oxidative stability of hydrocarbon [jet] fuels

54
B
11, 55, 44

SOURCE: Khimiya i tekhnologiya topliv i masel, no. 3, 1966, 52-54

TOPIC TAGS: fuel additive, antioxidant additive, anticorrosion additive, fuel deposit formation, jet fuel

ABSTRACT: A study has been made of the antioxidant effectiveness in [jet] fuels of an Ionol derivative, 3, 5-di-tert-butyl-4-hydroxybenzylmercaptan (designated BOBM in the source). 0.01-0.05% BOBM was added to the standard hydrocarbon [jet] fuels T-1, TS-1, T-2, and T-5. The thermal-oxidative stability of the fuels with or without BOBM was tested on a LSA RT apparatus (not described) at 100-180C for 4 hr in airtight vessels in the presence of VB-24 bronze. The criteria used for thermal-oxidative stability were: insoluble sediments formed (mg/100 ml), fuel optical density, fuel corrosivity (g/m²), oxygen absorption (ml), peroxide number (mg O₂/ml), and acidity (mg KOH/100 ml). It was found that BOBM was superior to Ionol with respect to insoluble sediments and corrosivity. BOBM also prevented peroxide and carboxylic acid formation and slowed down yellowing and oxygen absorption. It is

Card 1/2

I 18000-66

ACC NR: AP6007932

noted that, unlike Ionol, BOBM reacted with hydroperoxides thereby terminating the chain of the oxidation, and that BOBM actively inhibited oxidation not only at the initial stage but also in the course of this autocatalytic process. Orig. art. has: 5 figures. [SM]

TITLE: Sound absorption in the intermediate state of superconductors^{2/}

SOURCE: Zh. eksper. i teor. fiz. v. 50, no. 5, 1966, 1420-1424

TOPIC TAGS: superconductor, sound absorption, heat absorption, sound propagation, intermediate frequency, eddy current

ABSTRACT: Propagation of sound in the intermediate state is accomplished by movement of the interface between the phases. As a result, eddy currents appear in the normal layers. The Joule heat which is liberated in this case leads to additional absorption of sound. It is shown that at low acoustical frequencies ($\delta \gg a$ where δ is the skin-layer thickness and a is the spacing of the intermediate state structure) the absorption is proportional to the square of the frequency, and at not very small values of a , it exceeds the ordinary absorption attributed

Card 1/5

ACCESSION NR: AP4007177

40 Mc, the fluxes of Cassiopeia-A, Cygnus-A, Taurus-A, and Virgo-A were measured in the 12.5--40-Mc range, for which no reliable absolute values are known presently. To improve the accuracy, absolute measurements were made only for the most powerful source, Cassiopeia-A, using seven sets of radio interferometers with half-wave dipole antennas. The other fluxes were determined relative to this source. The 'collapse' of the spectrum at high frequencies was noted for all but Taurus-A. The emission measure and the ratio of the normal component of the magnetic field to the number of electrons per cubic centimeter of the discrete sources calculated from these measurements are 3.5, 3.5, 5.0 and 700, 700, 120 for Cassiopeia-A, Cygnus-A, and Virgo-A. It is assumed that the decrease in the spectrum is due either to absorption in H_{11} clouds or by a decrease of the refractive index in the source. Orig. art. has: 2 figures, 4 formulas, and 4 tables.

TITLE: Wide band (pulsating) amplifier with a combined high-frequency correction (correction of the front of the pulsations)

PERIODICAL: Radiotekhnika, v. 18, no. 4, 1963, 40-49

TEXT: A new method is proposed for correction of amplifier cascades. One concrete scheme is analyzed by this method. Stationary and transient characteristics are first investigated by known methods, and then methods are examined which permit obtaining significant supplementary gain in the amplification which, in the majority of cases, surpasses the gain of the complex induction correction (with great simplicity of the scheme). The scheme also allows one to obtain a gain in the ratio of signal to noise because of the suppression of low-frequency containing spectra of the noise. The investigated scheme for the simple combined correction has

Card 1/2

L 12469-63

S/108/63/018/004/006/008

Wide band (pulsating) amplifier...

these advantages: significant gain in amplification, simplicity, anti-noise properties, possibility of independent management with frequency and time characteristic and with the amplification coefficient. For more complex schemes, there are more problems, but it is possible to obtain greater amplification gains of the order of 8-10%. The combined correction, in comparison with other schemes, does not always have to give a great gain of amplification, because supplementary amplification is possible in two cascade schemes because of strong differences in frequency or time properties of the cascades. There are 3 tables, 10 figures, and 5 foreign language references.

S/0106/64/000/005/0014/0021

AUTHOR: Bazelyan, L. L.; Bruk, Yu. M.; Zhuk, I. N.; Men', A. V.; Shary*kin, N. K.

TITLE: Wide-band highly directional antenna for decameter wave-lengths

SOURCE: Elektrosvyaz', no. 5, 1964, 14-21

TOPIC TAGS: antenna, directional antenna, highly directional antenna, wide band antenna, wide band highly directional antenna, beam-width electric control, half wave dipole, shunt dipole, cylindrical dipole, array element, antenna element, antenna efficiency, antenna gain

ABSTRACT: A receiving antenna intended for radioastronomical investigation of discrete sources and cosmic background in the 20-40-mc range is described. The antenna was designed on the principle that the electric control of the beam at large scanning angles can be realized by phasing low-directional discrete elements, whose large

51"

ACCESSION NR: AP4037397

number insures the required degree of resolution. The antenna array, located along the W-E line, consists of 128 half-wave wide-band cylindrical dipoles arranged in 4 rows, each carrying 32 dipoles. The cylinders, formed by 18 elements of 8 mm each, are 1 m in diameter. The distance between array-element centers along and across the array is 5.5 m. The array elements are suspended 3 m above the ground. The signal excited in each element is transmitted to the output of each row through a matching balancer, three adders, and three coaxial cables with a total length of 101 m. The toroidal ferrite transformers used as adders made it possible in the 10- to 60-mc range to achieve a VSWR of 1.05 or better at a rated load with an efficiency of 95 to 97% or better. The electric control of the beam, which is accomplished by inserting delay cables between the adder and the output of each row, is carried out only in the N-S plane. The radiation pattern and gain of the antenna were determined by the simultaneous recording of signals from Cassiopea-A received with the antenna described and a standard interferometer consisting of two half-wave dipoles and subsequent comparison of the

Card 2/3

ACCESSION NR: AP4037397

results. At the same time the effective area (gain) was calculated by computer. Good agreement of experimental and theoretical data indicates that the antenna gain calculated on the basis of the gain found experimentally for the elevation of 81° will be close to actual, at least for the case of higher elevations. TITLE: Measuring the parameters of multiple-unit antennas

SOURCE: Pribery* i tekhnika eksperimenta, ⁹⁻no. 2, 1964, 96-100

TOPIC TAGS: antenna, multiple unit antenna, electrically steerable multiple unit antenna, musa, radioastronomic antenna, antenna parameter measurement, musa parameter measurement

ABSTRACT: A method of measuring the parameters of a multiple-unit electrically steerable antenna (musa) under operating conditions without introducing noticeable distortion into its circuit is considered. A low-loss measuring line is connected between the output point being measured and the load (radiators), and the values of loop and node voltages are noted. Then, a calibrated attenuator is connected in place of the multipole being tested, and the attenuator is adjusted until the same values of the loop and node voltages are attained. Simple formulas yield the values of the attenuation and efficiency of the antenna; the impedance,

Card 1/2

ACCESSION NR: AP4033119

radiation power, currents, etc., can also be measured by this method. The errors involved are theoretically assessed. The method was used in practice to measure the efficiency of a 128-unit electrically steerable radioastronomic antenna described by L. L. Bazelyan, et al. (Elektrosvyaz', 1964, no. 4). A 52-ohm multiprobe automatic measuring line was used. Estimated and measured efficiency curves are shown for frequencies within 20-40 mc. "In conclusion, the authors wish to thank P. A. Mel'yanovskiy and V. V. Krymkin for their help in carrying out the experiments." Orig. art. has: 4 figures and 13 formulas.

TITLE: Wide-band radiointerferometer with electric control of antenna pattern

SOURCE: IVUZ. Radiofizika, v. 7, no. 2, 1964, 215-224

TOPIC TAGS: antenna radiation pattern, antenna switching, radio astronomy, radio interferometer, radio emission

ABSTRACT: A broadband (20 — 40 Mcs) radio interferometer with a 470 meter base, oriented east and west, is described. The interferometer is intended for the investigation of radio emission from discrete sources and the cosmic background in the northern hemisphere by directivity-pattern scanning in a + 90° elevation sector and by using the earth's rotation. The interferometer consists of 220 8-dipole plane arrays with remote digital control of the directivity pattern in the meridional plane. The description covers the principles underlying the control of the beam and the summation of the signals, the arrangement of the antenna, the control elements, the antenna directivity pattern, the antenna effective area, and the antenna gain. The large base facilitates separation of the source radio

Card 1/4

ACCESSION NR: AP4039721

emission from the cosmic background. The two interferometer antennas are different and can be used separately. The eastern one can be used as a transit instrument. By using the western antenna with beam scanning, it is possible to make two or three records of a source passing through the azimuthal pattern, with intervals of 10 -- 20 minutes. The resolution of the interference diagram is $1.6 - 0.8^\circ$ in direct ascension and $4^\circ - 2^\circ$ in declination, at frequencies 20 -- 40 Mcs. It is recommended that the antennas be used separately for the radio emission of the cosmic background, in which case the resolution is $4 - 2^\circ$ in ascension and $34 - 17^\circ$ in declination for the eastern antenna, and $34 - 17^\circ$ in ascension and $4 - 2^\circ$ in declination for the western antenna (both at 20 -- 40 Mcs). Some precautions necessary in the operation of the interferometer are mentioned. Orig. art. has: 9 figures and 2 tables.

TITLE: Calculating principal parameters of phased antenna arrays having discrete tier-type asynchronous control of beam parameters

SOURCE: Radiotekhnika, v. 21, no. 7, 1966, 16-25

TOPIC TAGS: antenna array, phased array antenna

ABSTRACT: A method is described of essential simplification of the time-delay system of beam-position control by using discrete delay lines arranged in a binary scheme. Both the parallel and parallel-tier ("herringbone") time systems are considered. The binary scheme yields 2^m delay discrete positions with m cells in each line. This advantage is further enhanced by using a rational phasing scheme (see figure); φ_1 and φ_2 are the phasing errors in the first and second tiers, respectively. Asynchronous control of tiers results in phase errors of radiator currents. These errors

TITLE: Preparative method for phenyl-1,1,2,2-tetrafluoroethylphosphinotributoxytita-
nium. Class 12, No. 187020 15

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 20, 1966, 37

TOPIC TAGS: organic phosphorus compound, organotitanium compound, chemical synthesis

ABSTRACT: An Author Certificate has been issued for a method of preparing phenyl-1,1,
2,2-tetrafluoroethylphosphinotributoxytitanium. The method involves the reaction of
sodium phenyl-1,1,2,2-tetrafluoroethylphosphide with tributoxychlorotitanium at 40C
in an organic solvent (e.g., toluene). 7

TITLE: Neutralization of Pickling Solutions with the Removal of Liquid Phase and the Production of Heat-insulating Materials. (Neytralizatsiya travil'nykh rastvorov s ustraneniye zhidkoy fazy i polucheniye teploizolyatsionnykh materialov)

PERIODICAL: Stal', 1957, No.9, pp. 858 - 860 (USSR)

ABSTRACT: For neutralization of comparatively small quantities of spent pickling liquors (about 500 t/year) the use of solid lime or a lime dough is proposed. Laboratory and industrial experiments in which the neutralization with lime dough (lime powder plus some water) in a cement mixer was carried out, indicated that a solid mass (moisture content 60-65%) can be obtained which can be either disposed of or used with appropriate filling materials (asbestos, ground dry peat, straw, etc.) for the manufacture of heat-insulating materials. There are 1 table and 1 figure.

TITLE: Calorimetric detector for measuring the energy of an ionized beam

SOURCE: Teplofizika vysokikh temperatur, v. 3, no. 4, 1965, 623-626

TOPIC TAGS: temperature detector, calorimeter, heat transfer, thermal conductivity, ion beam, electron energy

ABSTRACT: The article describes the operating principles and the construction of a calorimeter based on heat transfer by thermal conductivity under steady state conditions. The instrument is applied as a detector for measuring the energy of an ionized beam in a deep vacuum. Choice of materials for the calorimeter must meet the following requirements: 1) the heat conductor must assure the required sensitivity of the instrument and measurement of the energy over a sufficient range and 2) the pickup (the surface turned toward the ionized beam) must have a minimum capacity for "secondary emission" and a stable degree of black-

PROCESSED AND REPRODUCED FROM THE ORIGINAL SOURCE

Oxidation of hydrohalic salts of phenylhydrazine in the presence of copper salts. A. H. Bruker and L. Z. Soborovskii. *J. Gen. Chem. (U. S. S. R.)* 5, 1074 (1935). Gatterman and Helele (*Ber.* 25, 1074 (1892)) obtained good yields of PhCl, PhBr and PhI by the oxidation of the resp. hydrohalic salts of PhNHNH₂ (I) with 4 mols. of CuSO₄. Treating CuCl₂ in 12% HCl in the cold, with stirring, with an equimol. amt. of I resulted in a complete decolorization of the soln. and pptn. of white, cryst. I.HCl.CuCl (II). The reaction is conceived as a partial oxidation of I with the formation of CuCl which reacts with I, giving II. This theory is supported by a nearly 100% yield of II obtained by the interaction of CuCl and I. The slight variations in the compn. of II obtained are caused by its instability to atm. O₂. Thus, II in HCl on exposure to air or addn. of CuCl₂ is rapidly decompd. with the formation of PhCl, but can be preserved for months by keeping it in hermetically sealed containers. The probable mechanism of the oxidation of I in HCl to PhCl with an excess of Cu²⁺ salts consists of preliminary formation of II which on further oxidation forms PhN₂Cl and this with CuCl gives PhCl according to the Sandmeyer reaction.

Complex compounds from the reaction of diphenylstibine chloride and triphenylstibine with benzenediazonium chloride. III. A. B. Bruker and N. M. Nikiforova.

Zhur. Obshchei Khim. (J. Gen. Chem.) 18, 1131 (1948). (C. C. 1, 32, 72). Reaction of Ph₂SbCl with equimol. or excess PhN₂Cl gives an equimol. complex, which on treatment with dil. HCl decomps. into Ph₂SbCl, N₂ and benzene, while decompt. in CHCl₃ gives Ph₂SbCl and N₂. The interaction of PhN₂Cl with Ph₃Sb does not give a complex under these conditions and the reaction proceeds by Ph₃Sb + 2PhN₂Cl → Ph₂SbCl + 2N₂ + PhN₂Cl (from 1.1 g. PhNH₂ in 1 ml. concd. HCl and 1 ml. H₂O and 1.1 g. NaN₂ in 1 ml. H₂O treated with 2 ml. AcOH, followed at 0-2° by 3.5 g. Ph₂SbCl in 20 ml. AcOH, gave 80% equimol. adduct, a white powder, m. 76-7°, generally insol. and decomp. in Me₂CO, evolving N₂. Heating with 1:2 HCl gives 65% Ph₂SbCl, m. 172-3°. Use of excess PhN₂Cl gives the same complex. PhN₂Cl (from 1.1 g. PhNH₂, as above) and 20 g. AcOH treated with 4 g. Ph₃Sb in 40 ml. AcOH gave only Ph₂SbCl, m. 142-3° (from C₆H₅OH). In the cold, HCl does not convert Ph₃Sb into Ph₂SbCl in the absence of PhN₂Cl. G. M. K.

PROCESSES AND PROPERTIES INDEX

10

Formation of arsenic and antimony aromatic compounds by the diazo reaction. IV. A. H. Bruker. *Zhur. Obshch. Khim.* (J. Gen. Chem.) 18, 1297-1311 (1948); cf. B. and Nikiforova, *C.A.* 43, 1737i.—One mechanism common to all preps. of aromatic As and Sb compds. via diazo or hydrazine compds. is given. $M^{III}X_3$ (M = As or Sb, X = halide, OH, or Ar) first forms a complex with ArN_2X : $ArNX + MX_3 \rightarrow [ArN]^{+}[MX_3]^{-}$. M then is oxidized to form a covalent bond with N: $[ArN]^{+}[MX_3]^{-} \rightarrow$

$ArN=N-NX$. Liberation of N_2 gives the product: $ArN=N-NX \rightarrow ArMX_3 + N_2$. The process probably goes via the *syn-diazo* form $Ar-N=N$. This explains why only one Ar adds to M, which could not be explained by a free-radical mechanism. Secondary and tertiary products (2 or 3 Ar or M) can be formed only if M already carries 1 or 2 Ar. In the presence of reducing agents, the following reactions lead to secondary and tertiary products: Zn

$ArN_2Cl.MCl_3 \rightarrow ArMCl_2 + N_2$, $ArMCl_2 + Zn \rightarrow ArMCl_2 + ZnCl_2$, $ArMCl_2 + ArN_2Cl \rightarrow ArN_2Cl.ArMCl_2$ [$ArN_2Cl.MCl_3 \rightleftharpoons ArN_2Cl + MCl_3$], $ArN_2Cl.ArMCl_2 \rightarrow Ar_2MCl_2 + N_2$, $Ar_2MCl_2 + Zn \rightarrow Ar_2MCl_2 + ZnCl_2$, $Ar_2MCl_2 + ArN_2Cl \rightarrow ArN_2Cl.Ar_2MCl_2$, $ArN_2Cl.Ar_2MCl_2 \rightarrow Ar_3MCl_2 + N_2$, $Ar_3MCl_2 + Zn \rightarrow Ar_3M + ZnCl_2$. When $PhNHNH_2$ reacts with arsenic acid, the latter reduces to arsenous acid and $PhNHNH_2$ is oxidized to PhN_2OH , which with arsenic acid gives benzenearsonic acid: $Ph-N=N-OH$.

$\xrightarrow{-Cu} PhAs(OH)_2 + H_2O + N_2$. Similarly, diphenylarsinic acid is formed, which, after reduction to the arsenous acid, with PhN_2OH forms $PhN_2OH.Ph_2AsOH$, decomg. to $PhAs(OH)_2 + N_2$. Further reduction gives *bis-diphenylarsine*. The Sb analogs from N_2H_4 deriva. are not known. To 300 ml. 1:2 HCl, 28.5 g. $SbCl_3$, and 32 g. $CuCl_2$ is added 24.8 g. 2- $C_{10}H_7N_2Cl$, HCl(I) in portions with stirring and the ppt. formed after 8 hrs. of continued stirring is washed with dil. HCl, alc., Et_2O , and dried in air, giving a yellow-green powder, 2- $C_{10}H_7N_2Cl.SbCl_3$ (48-50 g.). To 2- $C_{10}H_7N_2Cl$ (II) from 14.3 g. 2- $C_{10}H_7N_2Cl$ is added 18.1 g. $AsCl_3$ in 50 ml. HCl (d. 1.19), yielding 34 g. yellow $C_{10}H_7N_2Cl.AsCl_3$ (III), m. 103° (decompn.), sol. in HCl, alc., insol. in abs. Et_2O , glacial AcOH, decomp. in alc. in the presence of Cu metal or on heating with dil. HCl.

ASS-11A METALLURGICAL LITERATURE CLASSIFICATION

giving off N_2 . Similarly 7.2 g. III is obtained from 5.5 g. $AsCl_3$ in 100 ml. HCl with 0.5 g. $CuCl_2$, 0.5 g. $FeCl_3$, and 1 g. I. III decomps. to $2-C_6H_5AsO_2H_2$ (50%). $2-C_6H_5AsCl_2$ (3.8 g.) in 15 ml. abs. EtOH with II (from 1.8 g. $2-C_6H_5NH_2 \cdot HCl$ diazotized with 1.0 g. $AmNO_2$ at -310°) yields 5.3 g. yellow $C_6H_5N_2Cl \cdot C_6H_5AsCl_2$, m. 88° (decomps.), sol. in alc., H_2O , Me_2CO , insol. in CCl_4 , stable in air. Part of the decomps. product reduces to $2-C_6H_5AsCl_2$, m. 67° . $(C_6H_5)_3$ (0.2 g.) is obtained from the residue. Dry $(C_6H_5N_2Cl)_2 \cdot C_6H_5SbCl_2$ (5 g.) in 100 ml. 1:1 HCl is refluxed till all the N is evolved and a black oil appears. The oil yields 10% $(C_6H_5)_3$, while addn. of a concd. soln. of NH_4Cl in concd. HCl to the filtrate ppts. 0.2-0.22 g. $C_6H_5SbCl_4 \cdot NH_4Cl$, m. above 200° . To 1 g. of this complex is added 50 ml. H_2O to obtain 0.02 g. $2-C_6H_5SbO_2H_2$. From 18.1 g. $AsCl_3$, 50 ml. HCl, and Ph- N_2Cl (from 9.3 g. PhNH $_2$) is obtained 24 g. Ph- $N_2Cl \cdot AsCl_3$, m. 83° .
